

Command Description

The Show Line Direction Options command shows visual indication (plan and 3D view) of direction of any lines that are selected. It does not require a command to be open to operate. The command is used to turn on/off, set colour and size of direction arrows.

1. Check the **Show direction of selected lines** to enable the direction arrows. This persists within the TBC project until turned off again.
2. Pick a **Colour** for the direction arrows to display in.
3. Use the slide to adjust the **Arrow size** of the direction arrows.
4. Do either of the following:
 - Click **Apply** to apply the changes and keep the **Show Line Direction Options** command pane open.
 - Click **OK** to apply the changes and close the **Show Line Direction Options** command pane.
